Michael Granados Menani · Data Analyst

1. Executive Summary

3 key findings from 18 months of retail data across Central America

KEY FINDING 1 — REVENUE IS CONCENTRATED IN 2 FORMATS

- HIPERMERCADO and SUPERMERCADO together generate 77% of total GMV ($36.6M out of $47.4M).
- EXPRESS format contributes only 3.9% ($1.8M) — significant gap vs other formats.
- Honduras leads by country ($10.3M), El Salvador is the lowest market ($8.6M).

KEY FINDING 2 — 9 STORES ARE UNDERPERFORMING THEIR FORMAT BENCHMARK

- 9 out of 39 stores (23%) fall below the P25 GMV/m^2 threshold of their format.
- The top store (TIENDA_038) generates $1,468/$m^2$ — 4.6x more than the bottom store ($322/$m^2$).
- This gap represents a recoverable opportunity if low performers reach the format median.

KEY FINDING 3 — CRITICAL DATA QUALITY ISSUES REQUIRE IMMEDIATE ACTION

- 59.8% of transactions (104,632) have no customer ID — loyalty program is underutilized.
- 1 vendor (VND_31) is active in sales but not registered in the vendor master.
- Tienda 37 has transactions recorded 16 days before its official opening date.

2. Store Performance

GMV by format and country · GMV/m² ranking · Underperforming stores

GMV BY FORMAT

Format	GMV	% of Total
HIPERMERCADO	$18.3M	38.7%
SUPERMERCADO	$18.2M	38.5%
DESCUENTO	$9.0M	19.0%
EXPRESS	$1.8M	3.9%

GMV BY COUNTRY

Country	GMV	% of Total
Honduras	$10.3M	21.8%
Costa Rica	$10.2M	21.4%
Guatemala	$9.6M	20.2%
Nicaragua	$8.7M	18.4%
El Salvador	$8.6M	18.2%

TOP 5 STORES BY GMV / M²

Rank	Store	GMV/m²
#1	TIENDA_038	$1,468/m²
#2	TIENDA_039	$1,058/m²
#3	TIENDA_040	$896/m²
#4	TIENDA_036	$815/m²
#5	TIENDA_032	$797/m²

BOTTOM 5 STORES BY GMV / M² ⚠ UNDERPERFORMING

Store	GMV/m²	Status
TIENDA_022	$357/m²	BAJO_RENDIMIENTO
TIENDA_012	$347/m²	BAJO_RENDIMIENTO
TIENDA_007	$327/m²	BAJO_RENDIMIENTO
TIENDA_002	$327/m²	BAJO_RENDIMIENTO
TIENDA_001	$322/m²	BAJO_RENDIMIENTO

- 9 stores (23% of the network) are below the P25 GMV/m² of their format — flagged as BAJO_RENDIMIENTO.

3. Opportunities

Underperforming stores · Vendor GMROI · Customer loyalty

OPPORTUNITY 1 — UPLIFT UNDERPERFORMING STORES

- 9 stores are below the P25 GMV/m^2 benchmark of their format.
- If these 9 stores reach the format median, estimated GMV uplift is significant.
- Recommended actions: surtido review, staff training, store layout audit within 60 days.

OPPORTUNITY 2 — VENDOR GMROI REVIEW (CRITICAL)

- All 31 vendor IDs in the dataset show GMROI < 1 — meaning gross margin does not fully cover procurement cost.
- Worst performer: VND_017 with GMROI of 0.37 — generates only $0.37 of margin per $1.00 of cost.
- This requires an immediate contract and pricing review with all vendors.
- Note: VND_31 is not registered in the vendor master — identity unknown.

OPPORTUNITY 3 — LOYALTY PROGRAM EXPANSION

- 59.8% of transactions (104,632) are from anonymous customers with no loyalty card.
- Only 40.2% of customers are identified — limiting CRM, personalization, and retention analysis.
- Target: reduce anonymous transactions from 60% to 40% within 12 months through loyalty incentives.

4. Risks

Data quality · Operational risks · A/B test integrity

RISK 1 — UNREGISTERED VENDOR WITH ACTIVE SALES

- VND_31 appears in product catalog (Food and Personal Care categories) but is not in the vendor master.
- No contract, no tier, no country of origin on file — compliance and traceability risk.
- Action: identify and register VND_31 within 15 business days.

RISK 2 — STORE 37 TEMPORAL DATA INTEGRITY

- TIENDA_037 has 17 transactions ($13,422.65) recorded before its official opening date (June 1, 2024).
- First transaction was on May 15, 2024 — 16 days before opening.
- These 17 transactions are excluded from all analysis until source is verified.

RISK 3 — A/B TEST CONTAMINATION

- Stores 8 and 37 were assigned to BOTH CONTROL and TREATMENT groups simultaneously.
- 773 transactions totaling $219,431.94 are affected during the test period (Sep 1 – Oct 12, 2024).
- Test results cannot be trusted for these stores — re-run required with clean group assignment.

RISK 4 — TRANSACTION AMOUNT DISCREPANCY

- 1,745 transactions (1.0%) show a different amount between the transactions and items tables.
- Net difference: $32,102.62 — likely caused by promotional discounts not reflected in unit_price.
- Metric definition must be standardized: total_amount vs. sum(unit_price × qty).

RISK 5 — RETURNS VOLUME

- 3,526 RETURNED transactions detected — represents 2.0% of total volume.
- Return rate by format and category is not yet analyzed — recommended for next review cycle.

5. Recommendations

What to do · Who does it · By when

#	Action	Owner	Deadline
1	Audit the 9 BAJO_RENDIMIENTO stores. Conduct on-site review of layout, surtido, and staffing.	Regional Operations Managers	30 days
2	Identify and register VND_31 in vendor master. Verify compliance and assign tier.	Procurement / Vendor Management	15 business days
3	Launch loyalty incentive campaign. Target: reduce anonymous transactions from 60% to 40%.	Marketing / CRM Team	90 days
4	Re-run A/B test (exhibition strategy) excluding Stores 8 and 37. Ensure clean group assignment.	Merchandising / Data Team	60 days
5	Conduct full vendor contract review. All 31 vendors show GMROI < 1 — renegotiate pricing.	Procurement / Finance	45 days
6	Standardize GMV definition across all reports. Align on total_amount as the official metric.	Data Engineering / BI Team	15 days

NORTH STAR METRIC

- GMV per m^2 (weekly, by store and format) — normalizes performance across store sizes and directly measures how effectively each location converts physical space into revenue.

Note: Recommendations 1–4 address findings with direct revenue impact. Recommendation 5 (GMROI) requires further validation of cost data before full escalation.
